8. SETUP AND OPTICAL POWER ADJUSTMENT PROCEDURE

- Setup

Introduce individual current sources for DFB and SOA with common cathode. Spacer anode pin should be left open for normal operation. If required, introduce the other current source for heater pin. Thermistor pins can be used for temperature monitoring of the module.

- Optical power adjustment

With measuring optical power,

- (1) Adjust DFB (and Heater) current so that the optical power becomes the maximum.
- (2) Adjust SOA current to obtain the required power within the maximum rating.
- (3) If needed, repeat the procedure of (1) to (2).
